Institutional Hollow Core Discontinuation

Effective immediately, Mohawk will no longer offer Institutional Hollow Core doors as part of our product offering. This decision is a result of product engineering and testing deficiencies that we have found in the construction of this product.

Understanding the need for products that are a step up from the commodity type hollow core doors, Mohawk will continue to produce our Commercial Hollow Core Door. This door is manufactured with upgraded components as compared to standard hollow core. Below is a brief comparison:

Commercial Hollow Core

3" Honeycomb kraft paper core
2 ½" Stiles

Standard Hollow Core

5"-7" Honeycomb kraft paper core
1 ¼" Stiles

For additional consideration is Mohawk's newest family member – "Soft Core". Produced with AgriFiber (Wheat Straw) material, Soft Core doors are not only a one-piece light weight solid core door, they can also help contribute to the LEED MR-6 Rapidly Renewable Credit. With a density of 17 lbs per/sq ft, they are a perfect substitute for previous Institutional Core applications. More information on Mohawk's Soft Core can be found in Technical Bulletin Volume 6, Number T-2.
