Introducing Mohawk's Soft Core Door

DISCONTINUED 10/1/09

See Technical Bulletin Vol 9, T-31

Mohawk is pleased to introduce the newest member to our family of wood door products – Soft Core. Manufactured for high traffic areas where hollow doors are specified. Soft Core doors are not only a step up structurally, they are built with low density (LD) 17 lbs. per/sq. ft. wheat straw material for added environmental benefits.

While Soft Core doors cannot be fire rated, they do offer added sound protection (STC-27). These doors are a perfect fit for applications such as: bathroom entries, closet doors, and multifamily bedroom door applications. Customers will enjoy the benefit of a solid “feel” while accommodating light weight metal and wood jamb applications. Soft Core doors have an approximate weight of 57 lbs. for a 3/0 x 6/8 x 1 3/4” product as compared to 33 lbs. in hollow core and 107 lbs. in solid particle core.

A product specification sheet is attached and will be posted on the Mohawk website, as well. To view our complete product offering, please visit us at www.mohawkdoors.com
